

Matthew's Experience | Sophomore in BCMB and Neuroscience

The Krishnan Lab has given me the amazing opportunity of immersing myself in research. Everyday interaction with scientists helped me improve my understanding of science, including what I was currently learning in my undergraduate studies. In the Krishnan lab, I received close mentorship that greatly improved my research and technical skills. I continue to be fascinated by the underlying mechanism between changes in genotype and changes in phenotype. Being a part of this lab has challenged me to ask questions and question my understanding. I have been exposed to different focuses in neuroscience which has been especially rewarding. My motivation to learn, initiative in reading literature, and pursuit of further knowledge have made the Krishnan lab even more integral to my undergraduate career.
